

TIME TESTED GUTTER SYSTEM

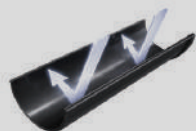

The Classic 120 Carbon PVC gutter system is a new colour solution to the time-tested gutter system Classic 120 by Devorex. It combines reliability, easy installation, and wide applicability.

Fast and easy installation

The connection of the gutters and their connecting elements by means of a "SINGLE CLICK" mechanism facilitates a quick and easy installation, without gluing. The sealing gaskets on gutter connectors compensate for temperature expansion and contraction of the material and prevent leaks.

Colouring and UV resistance

Devorex offers attractive and durable colours through innovative in-depth coloring of the polymer material and exceptional UV resistance.

Symmetrical gutter profile

The semi-round, symmetrical shape of the Classic 120 gutter makes it a practical product, easy to operate and keep in stock.

Wide applicability

Expands the application possibilities of the CLASSIC 120 drainage system, allowing installation on roofs with non-standard constructions.

Made in Bulgaria

The PVC gutter system Classic 120 Carbon is a reliable solution for small and medium residential, administrative, and industrial buildings. The system is manufactured in Bulgaria and is offered with a 10-year warranty.

CLASSIC 120 CARBON GUTTER SYSTEM

A colour that blends in and doesn't dominate.

DEVOREX®

ENJOY BUILDING WITH US!

WWW.DEVOREX.COM

Modern look. Time tested system.

Carbon is a deep dark shade, developed in the Devorex laboratory specifically for the Classic 120 gutter system in order to meet the visual requirements of modern facades, where drainage elements blend seamlessly into a clean and harmonious vision.

Based on RAL 7021 (Black Grey), Carbon represents an exceptionally dark gray, close to black. It is not anthracite nor graphite, but an elegant nuance with depth and character – a preferred choice in contemporary architecture.

The Classic 120 gutter system in Carbon colour combines modern aesthetics with proven functionality.

A colour that blends in and doesn't dominate.

Thanks to its low light reflectance value, Carbon does not create visual noise and integrates harmoniously into the façade. The focus remains on the building itself, not on the gutter. The color combines well with dark frames, concrete, wood and metal, making it a suitable choice for modern residential and administrative buildings.

Examine all system elements and the installation instructions.

SYSTEM ELEMENTS

1. Gutter – 3 m
2. Gutter angle 90°
3. Adjustable gutter angle 60°–160°
4. Running outlet Ø80
5. Gutter union
6. Gutter stoppered
7. Gutter fascia bracket
8. Top rafter bracket
9. Side rafter bracket
10. Pipe Ø80
11. Ø80 Branch 67.5°
12. Ø80 Branch 67.5°/Ø50
13. Ø80 Bend 67.5°
14. Ø80 Bend 87.5°
15. Ø80 Ending bend
16. Ø80 Pipe connector
17. Ø80 Pipe bracket
18. Bracket adaptor for roofing tile
19. Bracket adaptor for bitumen roofing
20. Bolt and nut
21. Lubricant
22. Universal gully
